Benign prostatic hyperplasia (BPH) treatment with Dr Allen's Device is the effective and safe solution, as it uses own body energy to reverse prostate enlargement. Thermobalancing therapy with Dr Allen's Device has been patented in the US as "Therapeutic device and method".

The patent is an acknowledgement that it is indeed a completely new technique for chronic non-malignant diseases. Dr Allen's device improves blood circulation in a prostate gland, while applies a natural thermoelement tightly to the body in the projection of the prostate.

This thermoelement accumulates the emitted body heat and becomes a source of energy. This safe energy eliminates the continuous trigger that supports prostate growth. As a result, the prostate stops its enlargement and reduces the enlarged prostate in size.

Standard treatments for BPH are drugs and various surgical interventions. These treatments have serious side effects that negatively affect the quality of life of millions of men worldwide.

### **Benign prostatic hyperplasia standard treatments can cause problems**

Long-term courses of risky drugs are widely used for BPH. The most popular of them are:

- Alpha blockers, which relax the muscle of the prostate and bladder neck that allows urine to flow more easily, Tamsulosin, terazosin, etc. **These drugs can develop fatigue, headache, dizziness, sexual dysfunction and even dementia.**

- Hormonal drugs - 5 alpha reductase inhibitors: finasteride, Avodart **responsible for irreversible side effects: impotence, depression, testicle pain, and even diabetes.**

It should be noted that BPH drugs gradually become

ineffective, but the side effects do not disappear.

Therefore, many men are looking for a surgical procedure to remove the prostate gland or part of it. Surgical procedures, including minimal invasive, have many unpleasant and life-long complications, which can cause depression, almost in 25%.

### **Thermobalancing therapy (T-Therapy) is safe**

Urinary symptoms, such as frequent urination at night, a weak urine flow, or the feeling that you should urinate after you just went, or other similar signs often appear in men after 50. This is due to an enlarged prostate that presses the urethra and bladder. However, BPH is not a life-threatening condition, so it should be treated with caution.

T-Therapy for the first time uses the safest energy. In February 2019, Innovative Journal of Medical and Health Science published a new article: The cause of chronic prostatitis and prostate enlargement is a change in the vascular level and requires similar treatment: innovative Thermobalancing therapy, which explains that this unique therapy treats entirely the prostate gland.

10-year empirical evidence and clinical research show that Dr. Allen's device effectively reduces prostate volume and, as a result, urinary symptoms in men with an enlarged prostate

The outcomes of clinical investigations on Thermobalancing therapy were published in leading peer-reviewed medical journals. The efficacy of T-therapy was discussed by medical professionals at the different health conferences worldwide: in the UK, USA, Spain, China, Italy and other countries.

### **Fine Treatment manufactures and delivers devices worldwide**

The prevalence of BPH increases markedly with increasing age and affects 70% of men aged 60-69 years in the United States. As the world's population ages, the incidence and prevalence of BPH play an important role in the quality of life of men, as it affects 80% of those 70 and older.

Fine Treatment, <http://finetreatment.com>, manufactures and distributes Dr Allen's Device for Prostate Treatment worldwide via Royal Mail Tracking service within a week. The price of delivery is included in the total price of the device.

Unlike the cost of standard procedures, calculated in thousands of US dollars, the Dr Allen Device with a price of less than 200 US dollars is the most economical solution for BPH treatment.

Dr Allen's Device is a class 1 medical device, which does not require the involvement of a notified body. As this treatment method is side effects free, every man can use it at home without worrying.

A recent article published in the World News of Natural Science, Thermobalancing therapy as Self-management tool, states that by using this therapy, as the first line of treatment for BPH, men can reduce enlarged prostate themselves at home and avoid serious side effects and complications caused by BPH drugs or surgical interventions.
