Prostate enlargement & chronic pelvic pain syndrome (CPPS) cause symptoms, which can be treated with Thermobalancing therapy with Dr Allen's Device for prostate treatment. This therapy is the only way to tackle the cause of these common for men diseases.

A scientific article: "Use of Thermobalancing therapy in ageing male with benign prostatic hyperplasia with a focus on etiology and pathophysiology," explains the cause of prostate enlargement.

Another article: The cause, aetiology and

physiopathology of chronic prostatitis / chronic pelvic pain syndrome (CP/CPPS) and its effective treatment with Thermobalancing therapy, explains the details of the cause of chronic pelvic pain.

These articles demonstrate that inflammation and enlargement of a prostate gland are caused by the pathological changes at the vascular level. The starting point is constriction of capillaries, which develops the focus of hypothermia. This leading to the pathological activity of capillaries and pressure inside the prostate tissue, causing pain and/or lower urinary tract symptoms (LUTS), which include: frequent urination during the day and at night, weak urine flow, etc.

Standard treatment options for men with prostate enlargement or benign prostatic hyperplasia (BPH) and chronic prostatitis are risky medications and for BPH are also used unsafe surgical procedures.

Standard treatments can harm the health of men

Medications for prostate enlargement and chronic prostatitis are almost similar. They all have side effects and often are responsible for developing new health problems. Medical intervention for chronic prostatitis, CP/CPPS starts usually with long-term antibiotics and painkillers, and as they ineffective, men begin use BPH drugs.

- alpha blockers, which relax the muscle of the prostate and bladder neck that allows urine to flow more easily, Tamsulosin, terazosin, etc. These drugs can be responsible for tiredness, sexual dysfunction, headache, dizziness and even dementia;

- hormonal drugs, 5 alpha reductase inhibitors: finasteride, Avodart responsible for irreversible side effects: impotence, depression, testicle pain, and even diabetes.

Therefore, all medications to treat prostate enlargement should be prescribed carefully and as a short-term treatment. Furthermore, the daily use of these dangerous drugs is very expensive.

Operations with BPH are different, some of them are removed, while others destroy prostate tissue. All these procedures have unpleasant complications. Therefore, approximately 25% of patients after minimally invasive surgery develop depression, so any operation should be taken only as a last resort.

Dr Allen's Device is safe for BPH & chronic pelvic pain

Prostate enlargement & chronic prostatitis are non-lifethreatening problems; however, high-risk long-term medications are widely used for their treatment. Contrary to drugs, Dr Allen's Device applies a natural thermoelement to the body. This thermoelement accumulates the body heat and becomes the source of energy itself, spreading energy to the prostate, improving blood circulation in the prostate gland.

Dr Allen's Device, which applies thermoelement tightly to the skin, is a class 1 medical device, which does not require the involvement of a notified body. So, everyone can use this device at home without worrying, as this treatment option causes no side effects. The delivery of Dr Allen's Device is guaranteed by Royal mail and USPS tracking services.

In contrast to all other treatments, the cost of Dr Allen's Device is USD 155 today. For most men, this is a onetime purchase, since the device works for at least a year. Fine Treatment, http://finetreatment.com, is an international distributor of wearable therapeutic Dr Allen's Device for Prostate Treatment and delivers it worldwide. The price of delivery is included in the total price of the device.

Thermobalancing therapy is approved by medical scientific data

2 clinical controlled trials on Thermobalancing therapy in men with prostate enlargement & chronic prostatitis, CP/CPPS were conducted and several articles published in peer-reviewed medical journals, which can be found on the "Fine Treatment: Medical Scientific Data" page, https://finetreatment.com/thermobalancing-therapymedical-scientific-data/.

A new scientific article: Personalized care using thermobalancing therapy can help men with chronic prostatitis / chronic pelvic pain syndrome to recover, will be published soon in the Personalized Medicine Universe journal, which is another confirmation of the unique possibility of recovery from chronic prostate disease with the help of Dr Allen's device.

The results of clinical studies were discussed by medical

professionals at various medical conferences around the world: in the UK, Spain, China, Italy and other countries. Thus, a man diagnosed with BPH or chronic prostatitis / pelvic pain can improve his well-being and healthy aging with the help of Dr Allen's Device.
